PROFILE

Data scientist and ML engineer motivated by work that creates measurable impact beyond the bottom line. I connect stakeholder problems to the right analytical approach, building pipelines and models that improve decisions and drive meaningful outcomes. Experienced across the full data lifecycle: from consolidating fragmented data environments and building ETL pipelines, to model training, evaluation, and deployment. Comfortable translating technical findings to both technical and non-technical audiences, and working cross-functionally in fast-moving, purpose-driven environments.

WORK EXPERIENCE

Data & AI Engineer | **Boundless HQ** | Dublin, Ireland
July 2025 – April 2026

Joined as intern and converted to a confirmed contract role within 3 months. Owned data analysis, modelling, and dashboard delivery across HR and CX operations.

- Applied NLP using Transformers to analyse historical job titles data across countries, surfacing hiring trends and workforce planning insights for the business.
- Migrated fragmented HR and CX data from siloed, inconsistent sources into a structured, unified warehouse model. Defined data standards, ownership, and documentation for each data product, establishing a governed source of truth with clear field definitions, quality rules, and audit trails across multiple systems.
- Shipped 3 analytics dashboards end-to-end (HR metrics, customer activity reporting, migration cohort tracking). Defined KPIs, built data pipelines, and iterated post-launch. HR dashboard reduced manual processing by 50%.

Logistics & Data Analytics Manager | **Corto Safaris Ltd** | Arusha, Tanzania
January 2022 – August 2024

- Built demand forecasting models for inventory management, cutting stockouts by 60% and overstock by 25%.
- Analysed purchase history and consumption trends to deliver actionable insights to operations, logistics, and finance teams, improving efficiency by 18%.

PROJECTS & ACADEMIC EXPERIENCE

Data Scientist & ML Engineer (Magpie) | **TU Dublin** | Ireland
September 2024 – December 2024 | Final Master's Project

- Led ML development in a 4-person Agile team, building a full-stack geospatial analysis platform (Python, Flask, PostgreSQL).
- Engineered an end-to-end computer vision pipeline: collected and labelled 2,000+ satellite images, trained YOLOv8 achieving mAP@0.5 of 0.84, deployed via REST API.
- Ran A/B testing and usability studies with 20+ users, iterating on UI/UX to improve satisfaction scores by **20%**.

Big Data — Steel Plate Defect Prediction | **TU Dublin** | Kaggle Competition
March 2024

- Built a PySpark ML pipeline for multi-class defect classification; achieved AUC-ROC of 0.864, ranking in the 65th percentile among 2,199 participants. Applied distributed computing to process industrial sensor data at scale.

EDUCATION

MSc Computer Science | Technological University Dublin, Ireland — *Sep 2023 – Mar 2025*
Key modules: Machine Learning, Deep Learning, Object-Oriented Programming

BSc Business Management | ESCP Business School, Paris, France — *Jan 2017 – Dec 2020*
Key modules: Statistics & Probability, Advanced Statistical Methods, Business Information Systems

SKILLS

ML & Data Science: Python (Pandas, NumPy, Scikit-learn, PySpark), Deep Learning (PyTorch / TensorFlow), NLP (Transformers, OpenAI API), Computer Vision (YOLOv8), Predictive Modelling, A/B Testing, Statistical Analysis
Data & Analytics: SQL, R, JavaScript, Data Augmentation & Visualisation, Feature Engineering, Retool, HubSpot
Engineering & DevOps: GitHub, Docker, CI/CD, PostgreSQL, REST APIs, AWS (S3), Jupyter, VS Code, Cursor
Ways of Working: Agile / Scrum, Stakeholder Requirements Gathering, Full Product Lifecycle, Technical Documentation

LANGUAGES

English (Fluent) | **French** (Fluent) | **Swahili** (Fluent) | **Spanish** (Conversational)
